DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The invention is directed to a printer, a method for controlling quality of printing density in a printer. Claims 1 and 16 identifies the uniquely distinct features of "displaying said stored image quality data, said determination results, said evaluation results of the visual evaluation and history thereof, wherein said history being displayed is of a sequence of evaluations results of the test patterns arranged in terms of times and dates" (claim 1) and "records said first test pattern for the automatic measurement of the image quality on a part of said recording material concealed by a member of a viewer for observing said diagnostic image on said recording material when said diagnostic image on said recording material is observed on said viewer" (claim 16). The closest prior art, Yamano, US 2002/0067925 discloses controlling quality of an output image; performing automatic measurement and visual evaluation of test patterns; determining image quality, storing the image quality data and displaying the stored image data. Either singularly or in combination with other cited references fails to anticipate or render the above underlined limitations obvious.

The prior art application, Yamano discloses displaying image quality data and evaluation results but fails to explicitly disclose displaying history thereof, wherein said history being displayed is of a sequence of evaluations results of the test patterns arranged in terms of times and dates and recording said first test pattern for the automatic measurement of the image quality on a part of said recording material

Art Unit: 2625

concealed by a member of a viewer for observing said diagnostic image on said recording material when said diagnostic image on said recording material is observed on said viewer.

The meaning of the sentence “displaying said stored image quality data, said determination results, said evaluation results of the visual evaluation and history thereof, wherein said history being displayed is of a sequence of evaluations results of the test patterns arranged in terms of times and dates” (claim 1) and “records said first test pattern for the automatic measurement of the image quality on a part of said recording material concealed by a member of a viewer for observing said diagnostic image on said recording material when said diagnostic image on said recording material is observed on said viewer” is defined in applicant's specification, paragraphs 71, 104-105, and figures 1, 5.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
